Local Language Digital Learning Resources

Submitted in partial fulfilment for the award of the

Degree of

Bachelor of Science in Computer Science

Submitted By

VAISHNAVI THUBE

Roll No.: 47

Under the Guidance of

Prof. Sabina Mam

Department of Computer Science

THEEM COLLEGE OF SCIENCE, COMMERCE AND ARTS

(Affiliated to University of Mumbai)

Academic Year: 2026-2027

Appendix III

CERTIFICATE BY INSTITUTE

I, hereby certify that **Vaishnavi Thube** Roll No**. 47,** Student of **Theem College of Arts, Commerce and Science** studying in **BACHELOR OF SCIENCE in computer science** program has completed C.E. Project entitled "**LOCAL LANGUAGE DIGITAL LEARNING RESOURCES**" in the area of Management Information Systems specialization for Academic year 2026-2027.

The project has been completed as a part of the academic requirements of the course under the guidance of the concerned faculty.

Date : **Place :**

Coordinator : **HOD**

Signature : **Signature :**

Certificate by the Mentor

This is to certify that **Vaishnavi Thube** has carried out the project titled "**LOCAL LANGUAGE DIGITAL LEARNING RESOURCES**"under my guidance and supervision. Their approach has been dedicated, analytical, and research-oriented.

This project work has not been submitted elsewhere for any examination or degree.

The project is recommended for the **Bachelor of Science in computer science** degree at Mumbai University.

Signature by the Mentor

STUDENT'S DECLARATION

I, **Vaishnavi Thube**, student of **Bachelor of Science in Computer Science** at **THEEM COLLEGE OF ARTS, COMMERCE AND SCIENCE**, hereby declare that I have completed the Community Engagement Project titled" **LOCAL LANGUAGE DGITAL LEARNING RESOURCES"** during the academic year 2026 – 2027.

Date : **Signature of student :**

ACKNOWLEDGEMENT

I would like to express my sincere gratitude to everyone who supported me in completing this project on "Local Language Digital Learning Resources in the Context of NEP 2020." I am thankful to my teachers and guide for their valuable guidance, encouragement, and suggestions throughout the preparation of this project. Their support helped me understand the importance of local and regional languages in promoting inclusive and accessible digital learning.

I am also grateful to my institution for providing the necessary resources and learning environment. I would like to acknowledge the contribution of various educational platforms, books, research materials, and digital resources that helped me gather relevant information for this study

ABSTRACT

The use of digital technology in education has created new opportunities for improving access to knowledge and making learning more flexible and inclusive." **Local Language Digital Learning Resources"** refer to educational content, applications, e-books, videos, online courses, learning platforms, and other digital materials developed or made available in local and regional languages. These resources are particularly important in multilingual societies such as India, where learners have diverse linguistic backgrounds.

This project explores the importance and role of local-language digital learning resources in achieving the objectives of **NEP 2020 and CEP**. The use of familiar languages can support better comprehension, participation, communication, and meaningful learning among students. Digital resources in local languages can also help bridge linguistic and digital gaps by providing learners with educational content that is accessible and culturally relevant.

The study highlights various types of local-language digital resources, their benefits, challenges, and their role in promoting inclusive and equitable education. It also considers challenges such as limited availability of high-quality content, digital access, technological infrastructure, language diversity, teacher training, and the need for regular development and translation of educational materials.
Overall, local-language digital learning resources have significant potential to strengthen multilingual education and support learner-centred teaching. Their effective development and use can contribute to making digital education more accessible, inclusive, and relevant to diverse learners.

Local-language digital learning resources can make education more accessible and inclusive. With appropriate planning, technology, teacher support, and quality educational content, these resources can provide valuable learning opportunities to students from different linguistic backgrounds

CHAPTER 1. INTRODUCTION

Education plays an important role in the social, cultural, and economic development of individuals and society. With the rapid growth of information and communication technology, the traditional methods of teaching and learning are gradually being supported by digital technologies. Digital learning resources such as e-books, digital textbooks, educational videos, online courses, mobile applications, virtual classrooms, podcasts, digital libraries, and interactive learning platforms have made educational content more accessible to learners.

However, access to digital education is not only a matter of having devices and internet connectivity. Language is also an important factor that influences the effectiveness of learning. Students often understand concepts more easily when they learn in a language that is familiar to them. In a multilingual country like India, where learners speak and use many different languages, the availability of educational resources in local and regional languages is therefore highly significant.

1.1 Purpose of the visit

The purpose of the visit was to understand the availability, use, and importance of **local language digital learning resources** in the educational context of CEP/NEP. The visit provided an opportunity to observe how digital technology and local languages can be integrated to support effective teaching and learning.
The main purposes of the visit were:

- To understand the concept and importance of local language digital learning resources.
- To observe different types of digital educational resources available in local and regional languages**.**

1.2 Background information

India is a linguistically diverse country with many languages and dialects used by learners in different regions. Language has a significant role in education because students often understand and express ideas more effectively when learning takes place in a familiar language. However, a large amount of educational content has traditionally been available in English or a limited number of widely used languages. This can create difficulties for learners who are more comfortable with their local or regional language.

1.3 Scope of the Report

The scope of this report is to study the **availability, importance, use, and effectiveness of Local Language Digital Learning Resources** in the context of **CEP/NEP**. The report focuses on how digital technology can support learning through local and regional languages and contribute to a more inclusive and accessible education system

CHAPTER 2:LITERATURE REVIEW

The literature on Local Language Digital Learning Resources shows that language plays an important role in making education accessible, meaningful, and inclusive. In a multilingual country such as India, the development of digital educational resources in local and regional languages has become increasingly important. The following review presents major ideas and developments related to multilingual education, digital learning, and local-language resources

2.1 Local Language and Learning

Previous research on mother-tongue and multilingual education indicates that learners benefit when educational concepts are introduced in languages they understand well. UNESCO literature emphasizes that the use of home languages can support inclusion, participation, and learning, particularly during the early years of education. It also identifies challenges such as inadequate learning materials in home languages and limited teacher capacity.

The literature therefore suggests that language should not be considered only as a medium of communication; it is also an important part of the learning process. Providing educational materials in familiar languages can help connect new knowledge with learners' existing experiences and cultural contexts.

2.2 Multilingual Education in India

India's linguistic diversity creates both opportunities and challenges for education. NEP 2020 places significant emphasis on multilingualism and recommends that, wherever possible, the home language, mother tongue, local language, or regional language be used as the medium of instruction, particularly in the foundational and early stages of education. UNESCO's 2025 report on multilingual education in India also highlights the importance of strengthening multilingual learning and teacher education.

The literature indicates that implementing multilingual education requires more than changing the language of classroom instruction. Appropriate textbooks, supplementary materials, teacher-training resources, digital content, and assessment materials are also required.

2.3 Digital Technology and Language Learning

The growth of digital technology has created new possibilities for developing and distributing educational resources in multiple languages. Digital platforms can provide videos, audio materials, e-books, interactive activities, online courses, and other resources that can be accessed through computers and mobile devices.

UNESCO's recent work on multilingual education notes that digital technology can help create, adapt, and distribute educational content in multiple Indian languages. It identifies digital ecosystems such as DIKSHA, BHASHINI, and StoryWeaver as examples of platforms that can support localized learning materials and multilingual

CHAPTER 3:METHODOLOHY

The methodology of this report on "Local Language Digital Learning Resources in the Context of CEP/NEP" was designed to understand the availability, use, benefits, and challenges of digital educational resources provided in local and regional languages. The study combines observation, interaction, and review of relevant educational resources.

3.1 Research Approach

A descriptive and exploratory approach was adopted for the study. The descriptive approach helped in documenting the available local-language digital learning resources, while the exploratory approach helped in understanding their use and relevance in the educational context

3.2 Objectives of the Study

The methodology was guided by the following objectives:

- To understand the concept of local-language digital learning resources.
- To identify different types of digital educational resources available in local and regional languages.
- To observe how teachers and learners use digital resources for educational purpose
- To understand the role of local languages in improving access to digital learning.
- To examine the benefits of local-language digital content.
- To identify challenges related to the development and use of such resources.
- To understand the relevance of local-language digital learning resources to NEP 2020.
- To develop practical understanding through observation and interaction during the visit.

3.3 Study Setting

The study was conducted in an educational setting where digital learning resources and technology-supported teaching could be observed. The setting provided an opportunity to understand how digital educational materials are used and how local or regional languages are incorporated into the learning process.

3.4 Data Collection Methods

Information for the report was collected through the following methods:

1:Observation:

The availability and use of digital learning resources were observed. Attention was given to digital devices, educational videos, e-books, applications, online platforms, and other technology-based materials.

2.Interaction with Teachers:

Informal discussions with teachers were used to understand their experiences in using digital resources, particularly resources available in local or regional languages.

3.Sampling:

A purposive sampling method can be used to select relevant digital resources and educational institutions. Students and teachers who regularly use digital learning materials in the selected local language can also be included.

For example, the sample could include:

- 50–100 digital learning resources for content analysis.
- 200–300 students for a questionnaire.
- 20–30 teachers for interviews or focus-group discussions.

5. Data-Collection Methods

a. **Content analysis:**
   Evaluate resources according to language accuracy, curriculum alignment, cultural relevance, learning objectives, multimedia quality, and completeness.

b. **Questionnaire:**
   Collect quantitative information about frequency of use, accessibility, satisfaction, perceived usefulness, and learning difficulties.

c. **Interviews/focus groups:**
   Interview teachers and students to understand their experiences, preferences, challenges, and suggestions.

d. **Usability observation/testing:**
   Ask selected learners to use representative resources and observe navigation compresions.

CHAPTER 4: DESCRIPTION OF THE COMMUNITY INTERACTIONS, OBSERVATIONS & ANALYSIS

The interactions with community members provided useful insights into their experiences, needs, expectations, and difficulties. The observations also helped in understanding the role of local-language content in improving learners' participation and comprehension.

The community showed an increasing interest in digital learning, particularly through smartphones. Learners commonly used digital platforms to watch educational videos, search for information, complete assignments, and communicate with teachers. However, the availability and use of learning resources in local languages varied considerably.

Students reported that digital resources such as educational videos, online notes, mobile applications, and digital textbooks helped them learn topics beyond the classroom. Local-language explanations were particularly useful for subjects that learners found difficult to understand through English-only material.

Observations During the Study:

1.Preference for familiar language:

Learners showed greater comfort when educational concepts were explained in a language they regularly used at home or in their community. Familiar language helped reduce difficulties in understanding terminology and instructions.

2. Increased use of smartphones:

Smartphones were one of the most commonly used devices for accessing digital learning resources. Their portability made it possible for learners to study outside the classroom

3. Limited availability of local-language content:

Although digital educational content is widely available, learners sometimes had difficulty finding high-quality resources in their preferred local language. This was particularly noticeable for specific academic topics.

4. Dependence on internet connectivity:

Access to online resources was affected by internet availability, network quality.

Key Insights from the Survey:

During the survey, we directly interacted with people to understand their experiences with digital learning in local languages. Their responses helped us identify some important observations: Learners showed greater interest when educational content was available in a familiar language. Many respondents preferred audio-visual content such as videos and voice explanations over lengthy written material.
Learners showed greater interest when educational content was available in a familiar language.

Many respondents preferred audio-visual content such as videos and voice explanations over lengthy written material Students felt that local-language explanations make difficult concepts easier to understand Respondents suggested that educational resources should be simple, interactive and mobile-friendly Some learners depend on teachers or family members to explain English-based digital content There is a need for more subject-wise and class-wise digital resources in regional languages.

The survey showed that local-language content can encourage learners who hesitate to use English-based platforms.

Outcome of the Survey:

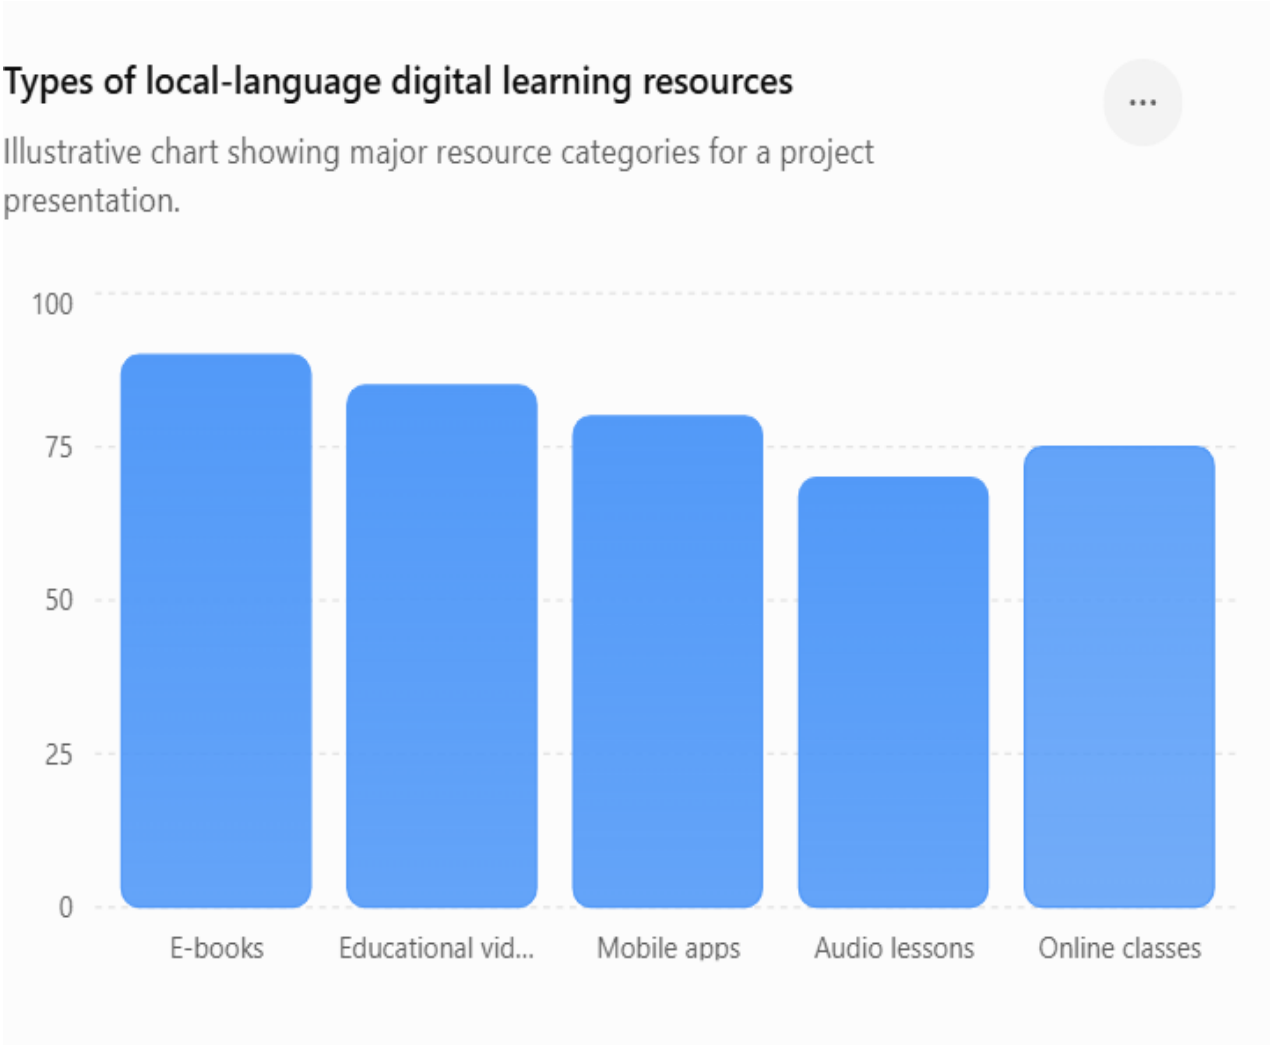

The interaction helped us understand the actual needs and preferences of learners. Instead of only identifying the language barrier, we focused on how digital resources can be made more accessible, understandable and learner-friendly.

During the survey, we found that:

- ✓ Many students prefer learning difficult topics in their mother tongue or local language because it is easier to understand.
- ✓ Most digital educational content is available mainly in English or Hindi, while resources in regional languages are comparatively limited.
- ✓ Students use YouTube, educational websites, mobile apps, and online videos for learning.
- ✓ Some students face difficulty understanding technical and academic terms when the content is only in English.
- ✓ Parents also feel that local-language resources can help them support their children's studies.
- ✓ People suggested creating more videos, notes, quizzes, e-books, and educational apps in regional languages.

▼

CHAPTER:5 PHOTOGRAPHS, DIAGRAMS, AND SKETCHES

Problem Identified:

Many students find it difficult to understand digital learning content when it is available only in English or other unfamiliar languages. This can create a barrier to effective learning, especially for students who are more comfortable with their local language.

Need for Local Language Resources:

Digital learning materials such as videos, e-books, notes, educational apps and online tutorials should be available in local languages. Learning in a familiar language helps students understand concepts more easily and participate actively in education.

Solution:

- Develop educational videos and notes in local languages.
- Provide subtitles and translations for digital learning content.
- Create local-language educational apps and websites.
- Use simple language and examples related to local culture and daily life.
- Encourage teachers and students to create and share local-language digital resources.

Expected Outcome:

Local-language digital resources can make education more accessible, understandable and inclusive while also helping students stay connected with their cultural and linguistic identity.

CHAPTER:6 ANALYSIS OF DATA IN RELATION TO STUDY OBJECTIVES

User Requirements:

- Mention what people said they need:
- Video lessons in local languages
- Audio explanations
- Local-language notes/PDFs
- Subtitles
- Local-language quizzes
- Simple educational apps/websites

Proposed Solution:
A Local Language Digital Learning Platform containing:

- 📚 E-books and notes
- 🎥 Video lessons
- 🎧 Audio lessons
- 📝 Quizzes and practice tests
- 🔤 Translation/dictionary support
- 📊 Student progress tracking

Benefits of the Survey:

1. Identifies Learning Problems – Helps understand the difficulties students face while learning in a language they are not comfortable with.

2. Understands Local Language Needs – Identifies which local languages students prefer for better understanding.

3. Improves Learning Resources – Helps develop digital study materials such as videos, notes, quizzes, and tutorials in local languages.

4. Increases Accessibility – Makes educational content easier to access for students from different backgrounds.

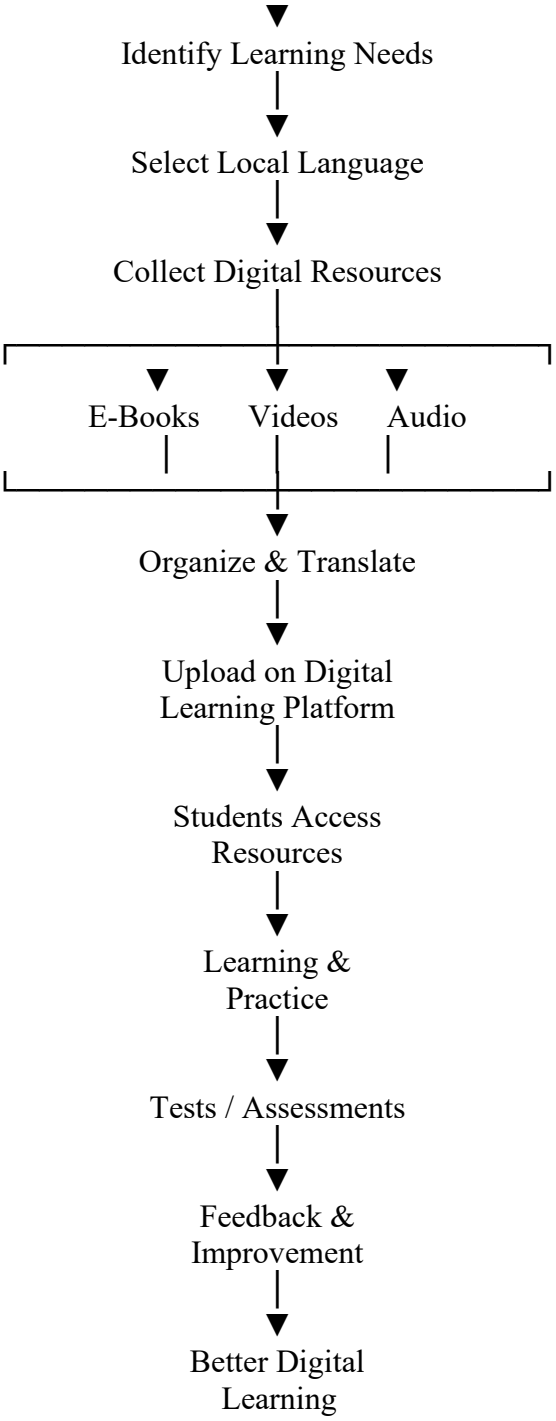

5. Improves Understanding – Learning concepts in a familiar language can make difficult topics easier to understand.

6. Encourages Digital Learning – Creates awareness about useful digital resources and educational platforms.

7. Supports Teachers – Provides information that can help teachers use local-language digital content in their teaching.

8. Provides a Basis for Solutions – The survey findings help us identify suitable solutions based on the actual needs of students and the community.

FLOW CHART

Identify Learning Needs
Select Local Language
Collect Digital Resources
E-Books
Videos
Audio
Organize & Translate
Upload on Digital Learning Platform
Students Access Resources
Learning & Practice
Tests / Assessments
Feedback & Improvement
Better Digital Learning

CONCLUSION:

The survey helped us understand that language can be a major barrier to digital learning, especially for students who are more comfortable learning in their local language. We found that many learners need simple, easily accessible and understandable educational content in regional languages.
This can make learning easier, improve understanding, and encourage more students to use digital education platforms. Through this project, we understood that local-language digital resources can make education more inclusive, accessible, and effective for everyone.

RECOMMENDATION:

1. More digital learning resources should be made available in local languages.
2. Educational videos, notes, and e-books should be provided in simple and easy-to-understand language.
3. Schools and colleges should encourage students to use local-language digital resources.
4. Learning apps and websites should support multiple regional languages.
5. Teachers should be trained to use digital resources in local languages effectively.
6. Awareness should be created among students and parents about the availability and benefits of these resources.
7. Digital content should be made accessible on mobile phones so that students can learn anytime and anywhere.
8. Regular feedback from students and teachers should be collected to improve the quality of local-language resources.
